1. Teaching and course quality

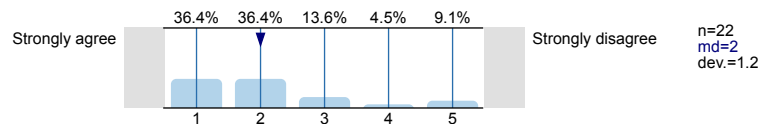

1.1) The lecturer explained things well

1.2) The course was intellectually stimulating

1.3) I am satisfied with the overall quality of the course

2.1) What is good about this course?

- ...
- Clear explanation, detailed process and theory description.
- Dr. Khiem Nguyen. Gem of a lecturer.
- Dr. Khiem Nguyen is an exceptionally responsible teacher. He actively provides us with all the help we need. The class atmosphere is excellent, and I truly enjoy his teaching.
- Everything
- general
- It helps me to develop my program knowledge
- I think the lecturer took his time explaining things and questions. He was also engaging and very nice.
- It is coursework based, so it really checks our understanding. This is a good way to test programming. Dr Khiem Nguyen offered additional help for people struggling with programming, showing willingness for people to do well.
- Khiem explained the course content very well and tried to make the course very engaging for us. I appreciated how much he was willing to provide extra python help, even after hours and I am very thankful for that because it really helped. The assignment was also quite straightforward to understand. The reason i am mentioning this is because I felt like this was not the case for assignment 2 in the second part of the course. The assignment 2 brief was not very clear on what the task was.
- Khiem's part of the course was great and run really well. I felt that he wanted to help us learn and achieve a good grade. He gave us enough time for assignments and quizzes to give us opportunity to complete them to a good standard. The overall course covered interesting topics that I feel will be useful to me.
- n/a
- Teacher has expertise in all areas
- Teachers
- Teaching of the professor's were very good
- The 100% coursework- realising that sometimes the best way to examine isn't always in an in person exam - most of 4th year and above should be more coursework as we are learning stuff that normally should require computers and software to do it properly. So the fact this course recognised that's its best examined on coursework was good.
- the course schedule
- The first part of the course, taught by Dr. Khiem, was especially great. He had a way of explaining complex concepts in a clear and engaging manner, which made it much easier to follow along. One of the things I really appreciated was how Dr. Khiem went above and beyond to help us understand the material. He added extra Python sessions to support us, and those were super helpful. It really showed how much he cared about making sure we got the content. When we were struggling with certain topics, he even added extra tutorials to give us more help, which was really thoughtful. Another thing that stood out was how fair he was with deadlines. When some students asked for extensions, he gave the entire cohort the same opportunity, making sure no one was left out. All in all, Dr. Khiem's efforts made a big difference in my learning experience, and I felt supported throughout the course so has everyone else I've spoken too.
- The lecturer made his best to explain in detail each topic
- The lecturer took us through the basics of Python too which was really helpful. The course content was really nice.
- The professors are kind, and friendly
- This course provided me with a great preliminary understanding of artificial intelligence.

2.2) How could this course be improved?

- .
- ...
- Coding

- Honestly I would say there is not a lot to be done, there is good content amount in the lecture and online material, tutorials were sufficient and resources given were good as well. My point I would make which I already emailed respective lecturer about is issues I had with the quizzes. I feel personally and this is my own opinion maybe I am wrong, but having a set amount of questions where you can only choose one of the answers but then you get a question where you can choose multiple answers makes it seem like there is more than one answer to that question and can be quite misleading as multiple times even though you could choose more than one answer there was only actually one answer. I would not mind this layout if it was kept consistent throughout the full quiz where there are multiple answers you can pick and only one is right, but to have 7/8 questions with only one choice for an answer then to have 1/2 questions where you can choose multiple answers but there is only one right answer just seems unfair to me. On top of that if the question is worth two marks, and only one answer is correct, and a student chooses both the right answer and another one, I feel like it would be fair to give them one mark at least for that respective question. Along with this I would say the difficulty of the exercise two that was originally uploaded on Moodle compared to the one we actually had to complete was significant

Also a slight note maybe the last week of semester etc, similar to how the first week we get taught a brief history and context of AI, maybe the last week could contain one about the future of AI and the possibilities.

Apart from this I am overall satisfied with the course.

- I have no idea (2 Counts)
- In my point of view there is no need for improvement it is already a good course only thing it would be better if there was more laboratory than the lecture
- I think is pretty good the way it is
- I think this course could be improved in two aspects. First, I hope the tutorial sessions can avoid being scheduled on Fridays from 5 PM to 6 PM. Additionally, the course content is challenging, so I would appreciate it if the instructor could provide more detailed explanations of example problems.
- I was looking forward to learning about neural networks, however I found Ji-Eun Byun's part of the course very inadequate.

Both moodle quizzes gave incorrect results, marking correct answers as incorrect, which was demotivating after working so hard. They were also opened before we had covered all of the content for it in lectures, and were closed only a couple of days after the last lecture on the content, which was difficult to manage with other assignments.

Any question or query people had, she would say to ask ChatGPT which gave the impression she either did not want to help, or didn't know the answer to any question. Either way, it is not great for a lecturer to do.

The last assignment was not communicated well at all. No one fully understood what to do and going to her office hours to ask, only made it more confusing. I'm still unsure if I submitted the right thing.

There was a mandatory 2 hour lecture out of the usual time-slot that clashed with another of my lectures, wasting precious time during the week the last assignment was due and just before exams. It would've been interesting at the start of the course, but it was unfair to make it mandatory to attend in that week.

- Keep evolving and including new technologies available for study
- Make assignment 2 brief clearer and change the deadline for it to not be right before exam season. It could have been a January deadline, or earlier in the semester, but having it be due the Friday before exam season started was not a good decision.
- material
- More code attempts
- n/a
- Neural Networks part. No one understood the professor. Assignment 2 was awful. Not intellectually stimulating. I am not in this course for any reason other than no exam honestly. I wanted PET but it was cancelled.
- No need
- Presentation & the content shared should be more.
- The course is excellent, and I truly appreciate the teacher's efforts. Perhaps incorporating short group discussions could make the class even more interactive.
- The mandatory 2 hour philosophy lecture was in the last week of teaching, a week before our exams begin and 4 days before a big deadline of the course. This was not good timing and it would have been better if that was put at the beginning of the semester. Especially as it did not require any technical knowledge.

Exercise 2 instructions were quite unclear and many people were not sure how to proceed with it.

- Way too many mistakes in quizzes - one quiz had 3 errors in 10 questions. It isn't really good enough and they were blindingly obvious if you got a demonstrator to do the quiz then it would've been spotted.

Removing coursework after it had been up for 2 weeks then changing it completely. I had already completed exercise 1 and then the lecturer took it down without telling us and then uploaded a whole new exercise which he admitted was harder. It was good practice but it was also in the middle of deadline season and when I pointed this out he offered to change the deadline to which would be fine if we had a break between lectures and exam starting this semester but we don't so this extension - because he decided to change it so late meant we ate into our revision time.

- While I really enjoyed the first half of the course, the second half presented a lot of challenges that made the experience much more stressful. One of the main issues was the unclear assignment guidelines. The expectations were not explained well, and there was very little guidance provided, which made it difficult to know exactly what was expected. This lack of clarity created a lot of confusion and made completing the assignments much harder than they needed to be.
Another major problem was the incorrect information provided during lectures and quizzes. There were multiple instances where the quiz questions and answers were wrong, which led to unfair grading. As a result, many of us lost grades through no fault of our own, and it felt especially frustrating when we had studied the material carefully.
On top of that, when some students requested extensions due to having an exam two days after the assignment was due, these requests were denied because they were considered “not a good cause.” However, I noticed that other students were granted extensions, which made me feel like I was at an unfair disadvantage. It was difficult to balance both the assignment and my other exam, and seeing others get extensions while those of us in similar situations were denied added to the stress.
Overall, the second half of the course was extremely stressful, and the lack of support and fairness in handling assignments and extensions left me feeling frustrated and overwhelmed which was disappointing after the strong start in the first half.
